# METROPOLITAN REPORT

**Economic Indicators for the New Orleans Area** 

Division of Business and Economic Research, University of New Orleans

Volume 20, No. 2

Forecasts for the 2<sup>nd</sup> Quarter 2009 through the 1<sup>st</sup> Quarter 2011

June 2009

#### **HIGHLIGHTS**

- In the first quarter of 2009, real GDP fell by 5.5%. This is the fifth quarter of recession. Total U.S. non-farm payroll employment was down 4.2 million jobs from year-earlier levels, and unemployment had risen to 8.1%. The end of the recession is not expected to occur until second quarter of 2010. Even then, national employment is not likely to rise until months after the turnaround occurs.
- 1,100 jobs were added to the New Orleans metropolitan area when comparing the first quarters of 2009 and 2008. This small gain of 0.2% is a welcome sign of stability when compared to the national loss of 3% during the same time period.
- Locally, the biggest employment gains over the year were state government (2,700 jobs), construction (1,700 jobs), and local government (1,200 jobs), Many of the new government jobs are concerned with education and health care. Significant job losses were in employment and temporary agencies (1,900 jobs) and in financial services concentrated in leasing of equipment and real estate (600 jobs).
- Showing regional contrast, construction jobs in the U.S. lost 12% while New Orleans gained 5%. Durable good manufacturing lost 2% locally but 11% nationwide.
- Unemployment is rising locally with an increase from 3.4% to 5.4% over the last year. The national rate moved from 4.9% to 8.1% during the same time.
- Estimates of retail sales in 2008 exceeded those of 2007 by 3.6%. This keeps retail sales 23% over pre-Katrina levels. However, the first quarter of 2009 shows a drop of 3.8% from the same quarter the previous year.
- New population figures released by the U.S. Census put the total New Orleans metropolitan population at 1.13 million as of July 2008. Orleans parish gained 24,000 over the year while the other 6 parishes gained just under 1,000 people altogether. These gains leave Orleans parish at 69% of pre-Katrina levels and the MSA as a whole at 87% of its old population.
- Due to national recessionary pressures, a loss in local employment of 2,200 is expected in the first year of the forecast. As the nation starts to pull out of the recession in 2010, the job trend is expected to reverse with an addition of 5,500 in the second year of the forecast.

### THE UNO MODEL

The UNO Forecasting Model provides detailed forecasts of economic activity in the New Orleans metropolitan statistical area which includes Jefferson, Orleans, Plaquemines, St. Bernard, St. Charles, St. John the Baptist, and St. Tammany Parishes. These predictions are based upon forecasts of national macroeconomic variables provided by the Economic Forecasting Center at Georgia State University. These forecasts are shown in Table 2.

Economic indicators are reported and analyzed over the last five calendar quarters, the latest of which is the first quarter of 2008. All percent changes in quarterly activity reflect differences with respect to the same quarter in the prior year for the individual sector or sub-sector under discussion unless otherwise noted.

Forecasts for the second quarter of 2009 through the first quarter of 2011 are shown in this report in Table 6.

# THE NATIONAL ECONOMY

The United States recession continued into 2009. In Figure 1, the depth and length of the current recession can be seen compared to recent history. Restricted credit availability and continued bad news about particular sectors of the economy caused more pessimism about the prospect for a speedy recovery.

Consumers are still shocked by the decline in the value of their homes and other assets. Together with concerns about the future of their iobs, this led households to borrow less and save more. Their lack of confidence about the future of the economy and closer scrutiny of their credit scores by lenders caused two-thirds of consumers to report spending less on credit cards in a recent poll. As a result, the savings rate spiked to nearly 6% when it was close to zero just as recently as the first quarter of 2008 While this move is good for (Figure 2). individual households, and many had lamented the previously low national savings rate, the reduction in consumption (which comprises about 70% of GDP) reinforced the problems in the U.S. economy.

It has been suggested that the U.S. is returning to normal after 15 years of excessive spending fueled by reckless credit behavior of consumers and lending institutions. The manufacturers of durable goods, such as cars, RVs, appliances, furniture, as well as those of luxury goods are threatened by this change in consumer behavior in the short term. With the recession also present overseas, the markets for U.S. made goods have also suffered.

Throughout the U.S., commercial building plans were put on hold as profitability became less certain and credit less available. Excess capacity and oversized inventories insured that business investment would not come quickly.

In the last year, 4.2 million jobs or 3% of all jobs were lost across the U.S. with the hardest hit areas being in construction and durable goods manufacturing (Figure 3). Initial unemployment claims went up 75% over the year. This resulted in an unemployment rate which rose from 4.9% to 8.1% over the year. Through the end of the first quarter of 2009, these negative trends did not show signs of stopping.

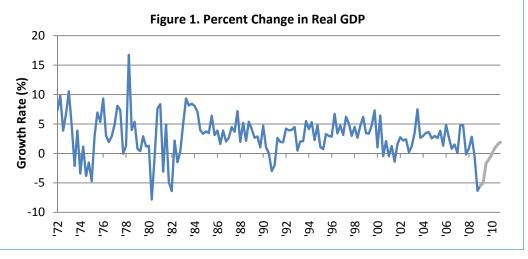

It remains to be seen if the Obama stimulus bill will help rally the economy. It is hard to measure the success of the bill, because its presence and the reassurance it provided to some may have modified the downturn. That is, things could have been much worse.

While recent recessions have been short-lived and the downturn has been quickly followed by a swift rebound, this recession is expected to last until the second quarter of 2010. However, the growth is expected to be slow with a real GDP growth of about 1% as the recovery begins. The Georgia State Forecasting Center does not expect a return to the days of 5 to 7% GDP growth in the forecast window. Traditionally, job growth does not start again until after the recession ends. Georgia State's forecast does not show job growth starting until the first quarter of 2011.

# THE NEW ORLEANS AREA ECONOMY

#### **OVERVIEW**

The New Orleans economy has been stable in the last year, with losses of manufacturing and employment agency jobs balanced by gains in private health and education and government. There were also gains in construction; this trend is in direct contrast to a severe drop in construction activity elsewhere. Though the job situation in New Orleans is not robust, it is substantially better than the national situation. The overall employment growth fueled by the recovery post-Katrina has been forced flat by the national recession.

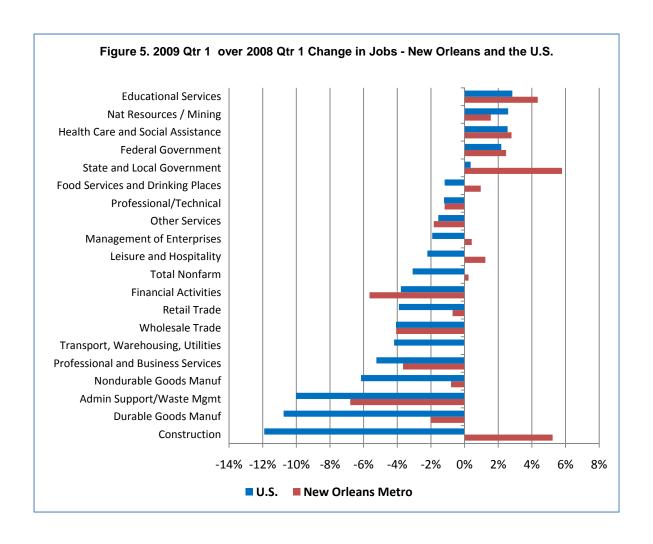

Employment remains at just 86% of its pre-Katrina level. Population, still slowly returning, is at 87% of pre-Katrina levels. Unemployment has grown but the local labor market is still much tighter that the national situation.

The latest data on wages show the average weekly wage growing 5% over the year. With stable employment and earnings, the money flowing through the metro retail establishments has declined about 4% this year. Levels of sales in total are still above pre-Katrina levels.

Job gains over the last year were 1,100. Due to national recessionary pressures, a loss in local employment growth of 2,200 is expected in the first year of the forecast. As the nation starts to pull out of the recession in 2010, the job trend is expected to reverse with an addition of 5,500 jobs in the second year of the forecast.

#### **New Orleans Jobs**

In the first quarter of 2009, the job count was up 0.2% (1,100 jobs) over last year's first quarter totals. 4,500 jobs were lost to the New Orleans metropolitan area in the first quarter of 2009 from the previous quarter, but this movement is a normal seasonal decline. The significant thing is that year over year gains are slipping. In 2007, in the midst of a strong period of the Katrina recovery, each quarter was growing about 7% above its respective quarter the year before. In 2008 that slipped to about 3%. This quarter, the difference is only 0.2%. Orleans managed to hold onto its job growth of the year before, but little new growth has been Essentially, national recessionary added. pressures are finally flattening the job growth coming out of the Katrina recovery.

The largest losses over the year were in Administration and Waste Management. 1,000 jobs were lost this quarter in employment and

temporary agencies, bringing the total loss over the year to 1,900 jobs, a 6.8% drop. 700 jobs were lost in financial activities to bring the losses over the year to 1,500, a 5.6% loss. The heaviest losses in financial were in real estate and equipment leasing, where 600 jobs were lost. Information lost 1,300 jobs, but this is a very volatile sector. Jobs in this sector move up and down as movie projects start up and finish.

The largest job gains over the year were in construction and government. State government accounted for 2,700 of the government gain. This represents a 13% gain of state jobs in one year in the New Orleans area. This would include state employees for recovering public health care and public education institutions. Local governments increased their employment by 2.5% by adding an additional 1,200 jobs. Construction gained 1,700 jobs over the year, a 5% growth.

#### New Orleans vs. the U.S.

The slight gain of New Orleans jobs of 0.2% over the year, as small as it is, is still a welcome contrast to the nation's average loss of 3.1% of all jobs. This is a welcome sign of local stability compared to the job losses occurring nationwide. Figure 5 contrasts the changes in sectors of employment between the U.S. and New Orleans.

Construction, which retracted more than any other U.S. job sector, with a 12% loss in jobs over the last year, gained 5% in New Orleans. Construction in New Orleans is being fed by recovery dollars – either insurance, federal dollars, or personal savings. As well, construction activity has benefited from the start up of major bridge and refinery projects unrelated to hurricanes.

The durable goods manufacturing sector has lost 2% of its jobs in the New Orleans area this year, but this change is dwarfed by the 11% loss in this sector in the U.S. as a whole.

Nationwide, state and local jobs are at a standstill with a small gain of 0.4%. In New Orleans, they increased almost 6%. These jobs are those recovered from Katrina as state offices and hospitals reopen. State budget problems due to changes in the structure of the state income tax and to the drop in the price of oil and may make similar gains in the future unlikely.

# Unemployment

Unemployment rates show that despite the losses in jobs noted above, that the overall labor market is much tighter in the New Orleans area than nationally (Figure 6). The national rate increased again in April to 8.9%. The New Orleans MSA rate has stayed constant at 5.3% for 3 consecutive months while the nation increased each month. The Orleans Parish labor market, with an unemployment rate of 7.5%, is not as healthy as the rest of the MSA but is currently under the national levels of unemployment. Despite recent increases in unemployment, the unemployment rate in the New Orleans metro area has consistently remained below the national average rate through the recession, partly due to the Katrina population loss which put workers in scarce supply.

Locally, the count of unemployment claims being filed continues to grow. At the start of 2008, an average of 400 unemployment claims were filed each week locally. By the first quarter of 2009, the average weekly claims had doubled to over 800. Another disturbing indicator is that of continued claims which has gone from an average of 3,000 to 9,000. This means that many of the unemployed are not able to find new jobs.

  4 -- Taxable sales include do not include Plaquemines parish
- 5-- Motor vehicle sales are for all 7 parishes.

#### Retail

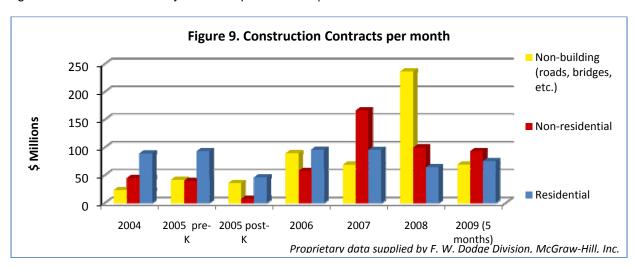

Retail sales show little of the effects of the national recession putting a damper on discretionary spending. In Figure 7, it can be seen that estimates of sales of taxable items, not including automobiles, in 2008 exceeded those of 2007 in total. In that year, they were up 3.6%. However, the first quarter of 2009 shows a drop of 3.8% from the same quarter the year previously. This still keeps retail sales over pre-Katrina levels by well over 20%.

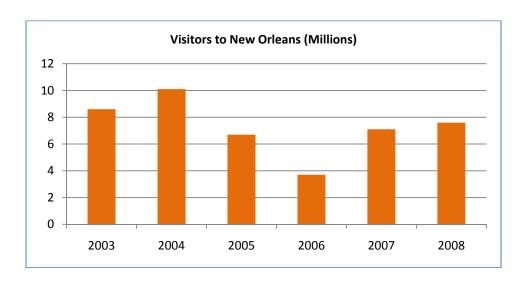

In contrast, Figure 8 shows how New Orleans sales of autos compare to the national trends of the auto sales. The spike after Katrina was generated by the need to replace thousands of flooded cars. Since that time, New Orleans auto sales have paralleled the steep national trend downward, but generally stayed about 10% higher than the nation's. By the first quarter of

2008, sales had dropped 28% from 2008.

#### Construction

Figure 9 shows the relative size of different types of construction contracts. In 2007, nonresidential construction activity dominated the local market. This category includes the construction of commercial buildings and refineries. However, in 2008, non-building construction, such as roads, bridges and flood control played an enormous part. In early 2009, thouah non-building and non-residential contracts are less than in recent years, they are still about twice what they were in 2004. Cashbased residential construction, common post-Katrina, is not included in any of the statistics in this report. Figure 12, later in the report, shows the distribution of non-residential construction by parish.

#### **Tourism**

The New Orleans tourism industry showed signs of continuing recovery through 2008. 7.6 million visitors came to New Orleans in 2008, an increase over the 7.1 million who came the previous year. Visitor spending is estimated to have grown to \$5.2 million up from \$4.8 million in 2007. However, as the national recession took hold, deplanements at Louis Armstrong airport are down 9.7% from the same quarter last year. In April, seat capacity at Armstrong airport had been reduced 4% over the previous year, but this compared favorably to the 8% loss of seat capacity nationwide. It should be noted that the first quarter of last year was an extremely busy time in New Orleans tourism and included the BCS championship and NBA All Star game among other events. 2009's first quarter might have been expected to show a slight decline, but not to the extent indicated this year.

However, the local industry is suffering from the impact of the U.S. recession. Nationwide, the tourism industry is struggling. People are still traveling, but they are taking advantage of "bargain basement" deals on hotels and air fares. Shorter stays at lower rates have left hotel managers struggling to generate tolerable revenue per room.

Gaming revenue has followed the same downward pressure. Total gambling revenues for the first quarter are down 10.5% compared to those a year before.

#### Port

Foreign trade tonnage at the Port of New Orleans grew 11% from the same quarter a year ago. Imports grew more than exports. This runs counter to the national trends. However, though this quarter looks good compared to last year, the port is shipping less tonnage than levels common 10 years ago. Nationally, the value of shipped goods dropped sharply. The value of U.S. imports in the first quarter of 2009 dropped almost 30% over the same quarter of the previous year. Exports dropped at a somewhat slower but still dramatic 21% decline. These double digit movements are signs of the turmoil in the global economy.

## The Forecast

State government budget reductions and the national recession will continue to impact the New Orleans area economy. Tourism is especially vulnerable to consumer confidence, and activity at the port is dependent on global economic health. With the national recession expected to make a slow recovery, these sectors could be affected.

The upward path of the recovery in New Orleans has flattened. Population continues to move up slowly, but employment has slowed. Due to national recessionary pressures, a loss in local employment of 2,200 is expected in the first year of the forecast. As the nation starts to pull out of the recession in 2010, the job trend is expected to reverse with an addition of 5,500 in the second year of the forecast.

Orleans and Jefferson Parishes Only

p Preliminary Estimate

#### Oil and Gas

Indicators for the oil and gas industry worldwide have been incredibly volatile. The price of oil averaged \$43 in the first quarter of 2009. This was a 56% drop in one year. Natural gas fell 42% in the same time period. The U.S. rig count fell Then, in the second quarter of 2009, the price of oil bounced back to the \$70 range. In the meantime, Louisiana was slowly recovering from hurricane damage and proceeding with business for the segment of the industry that resides here. Perhaps due to the long range nature of deep water platforms, the indicators show much slower response to the price drops. Over the last year, Louisiana rigs increased 8% while Louisiana production of natural gas and oil increased 2.4% and 1.3%, respectively. Mining jobs in the New Orleans area increased 1.6%. However, if the national industry turmoil continues, one can expect some decline locally as well.

# **Population**

New population figures released by the U.S. Census put the total New Orleans metropolitan population at 1.13 million as of July 2008. Orleans parish gained 24,000 over the year while the other 6 parishes gained just under 1,000 people altogether. These gains leave Orleans parish at 69% of pre-Katrina levels and the MSA as a whole at 86% of its old population.

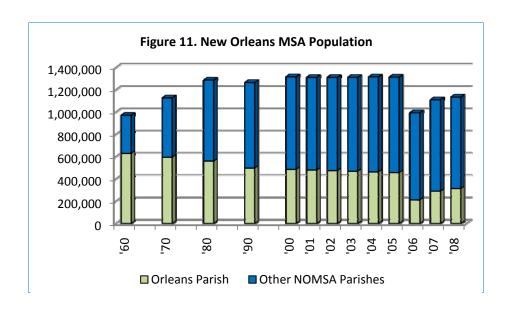

The 24,000 gain for Orleans Parish was an 8% gain over the year. This put the City of New Orleans, which shares the parish boundaries, into

national press as ironically ranking both the fastest growing city in the United States and the city with most population loss, depending on the time interval chosen for calculation. The recent gain was due to recovery of population displaced by Katrina. As construction of housing was completed in flooded areas, families were able to move back, often from outlying parishes where they had been waiting. St. Bernard also grew a strong 13% during this time. Because much of the movement was from parishes within the boundaries of the metropolitan statistical area, the metro during the same time grew a more moderate 2%.

Figure 11 shows a history going back almost 50 years. It can be seen that over the long-term, the New Orleans area, after growing for 2 decades, did not grow much from 1980 through 2005. There was also a very noticable internal population shift from Orleans parish to the suburban parishes from 1960, when Orleans Parish contained 62% of the population of the MSA, until 2004 when Orleans contained only 35%. In summer 2008, Orleans makes up 27% of the area but is definitely growing.

# Remaining Impact of Katrina

Prior to Katrina, the New Orleans metro economy had about 610,000 jobs. At the low point after Katrina, employment totaled just 426,000 jobs (70% of pre-Katrina employment). Since that time, employment in the local economy has recovered to a total of about 526,000 jobs (87% of pre-Katrina seasonalized levels).

#### **PARISH DATA**

Data for individual parishes start on the next page. Labor data available for individual parishes take longer to be released than metropolitan area statistics. Jobs and earnings data for parishes are from the third quarter of 2008 and are derived from data collected for unemployment insurance taxation. The data is recorded by place of work. Please note that these are not in synch with the tables for the metro area shown earlier in the report because of the greater lag.

Orleans Parish showed the most job growth over the last year as it added 4% more jobs bringing total earnings at Orleans parish companies up 5%.

On the negative side, St. Charles, lost 0.3% of its jobs but still showed an increase of earnings of almost 9% with a corresponding increase of 9% in the average weekly wage. St. Charles picked up jobs in construction and transportation/warehousing.

There were some extreme movements at the parish level. Orleans parish had a gain of 15% in health and social services jobs. Both Orleans and St. Bernard gained over 12% in retail jobs with a corresponding increase in taxable sales during the same time. St. Bernard's taxable sales moved to 17% more than the same quarter the year before.

Jefferson had a small job gain of 0.5% while St. Tammany had a small loss of 0.7%. These parishes had the lowest unemployment rates at

4.5% and 3.8%, respectively. Jefferson gained 1,100 health jobs while losing 600 retail jobs. St Tammany gains in manufacturing and accommodation were not enough to make up for losing 500 retail jobs and 500 transport/warehousing jobs.

St. John managed to make an increase of almost 4% of its jobs. St. John picked up jobs in construction and other services. Plaquemines Parish was stable with an increase of 0.8% of jobs over the year. It lost some health jobs but gained 40 manufacturing jobs.

It can be seen in Figure 12 below that there has been a shift in non-residential construction to Orleans and St. Bernard. As their population recovers, commercial construction has followed. There is less construction of that type going on in the more fully recovered Jefferson and St. Tammany parishes which would be more likely to respond to national recessionary pressures. The enormous spike in St. John Parish in 2007 was mostly due to a refinery expansion.

#### **NOTES**

The 7-parish area defined as the New Orleans-Metairie-Kenner Metropolitan Statistical Area contains Jefferson, Orleans, Plaquemines, St. Bernard, St. Charles, St. John the Baptist and St. Tammany parishes. St. James used to be considered part of the New Orleans MSA. However, in 2003, due to changes in commuting patterns, St. James Parish was removed from the New Orleans MSA by the federal Office of Management and Budget. However, St. James is included in the average wage data.

<sup>\*</sup> The number of jobs and corresponding wages for establishments subject to unemployment insurance taxation. Notable exclusions are employees of very small businesses (under 4 employees), self-employed persons and salespersons on commission-only bases.
\*\* Proprietary data provided by F. W. Dodge Division, McGraw-Hill, Inc.

<sup>\*\*\*</sup> St. Charles Parish Taxable Sales are overstated because their parish tax is a sales and use tax which also includes some purchase made elsewhere and used in the parish
